

* Import java.util.Scanner

```
Public class tower {
```

```
static void Hanoi (int n, char source, char auxi, char target) {
```

```
if (n == 1) {
```

```
System.out.println ("Move disk 1 from " + source + " to " + target);
```

```
return; }
```

```
Hanoi (n-1, source, target, auxi);
```

```
System.out.println ("Move disk " + n + " from " + source + " to " + target);
```

```
Hanoi (n-1, auxi, source, target); }
```

```
Public static void main (String[] args) {
```

```
Scanner sc = new Scanner (System.in);
```

```
System.out.print ("Enter number of disks: ");
```

```
int n = sc.nextInt();
```

```
System.out.println ("\n steps to solve tower of Hanoi " +
```

```
Hanoi (n, 'A', 'B', 'C'); "disk");
```

```
sc.close();
```

```
} }
```

* Write a c++ code which includes class and objects.
find out the space occupied, use sizeof() for the object

```
#include <iostream>  
using namespace std;
```

```
class student {
```

```
Public:
```

```
int rollNo;
```

```
float marks;
```

```
char grade; };
```

```
int main()
```

```
{
```

```
student s1;
```

```
cout << "Size of student Employee object = " <<
```

```
sizeof(s1) << "bytes" << endl;
```

```
return 0;
```

```
}
```

* output:

size of student object = 12 bytes

But in manually we have = 9 bytes
