

(2) Yes, recursion is still used in modern programming.

Reasons:

- It provides a simple and elegant solution for complex problems.
- It is useful for tree traversal, graph traversal, and divide-and-conquer algorithms.
- It is widely used in algorithms such as quick sort, Merge Sort, Binary Search, and Depth first search.
- It helps solve backtracking problems like Sudoku, N-Queen, and maze solving.
- It is suitable for processing hierarchical data such as file systems & HTML structure.

Limitation:-

Recursion uses extra memory due to function calls and may cause stack overflow for very deep recursion.

(3)	C	JavaScript	Kotlin
	C++	PHP	Scala
	Java	Ruby	Haskell
	Python	Go	Rust
	C#	Swift	

⊙ find out the history of tower of hanoi

⊙ Today from the Mng 7:30 AM - 4:30 PM list out various data structures in your surroundings.

- (1) Queue line at the mess
- (2) Contact list in a phone
- (3) Music playlist
- (4) Web browser history
- (5) Books arranged on a shelf
- (6) Google maps
